

New Year's Puzzle by Marek Penszko

20	=		+		+	
		×		+		-
2	=		×		:	
		-		-		:
0	=		-		-	
		=		=		=
		20		2		1

Enter single digits into each of the nine empty cells, so that all the equations are correct.

Since 0, 1 and 2 are already visible, the only digits that can appear in the empty cells are the digits from 3 to 9, some of which appear more than once.

The calculations are to be done strictly from left to right, or from top to bottom (ie. ignore operator precedence).
